CAREER OBJECTIVE

  I am a passionate, hard-working entry-level **front-end web developer**. My aim is to make people's lives better & easier by creating beautiful and useful software. As a developer, I am constantly seeking new challenges and opportunities to learn and grow. I enjoy staying up to date with the latest industry trends and exploring emerging technologies. Overall, I am excited about the opportunity to apply my skills and contribute to a dynamic and innovative team. I am eager to take on new challenges and am confident in my ability to create engaging applications.

EDUCATION

Finished June 2023
Technical College Radauti
Computer Science and Mathematics

- Algorithms and Data Structures
- Databases
- C++ programming language
- Web development

EXPERIENCE AND PROJECTS

Personal portfolio

Live website / Github Repository
BeatsXchange: e-commerce website
React, NextJS, TypeScript, TailwindCSS, Prisma, MongoDB

- Built a full-stack audio store: you can authenticate, view products, add them to cart or to favorites.
- All the products are stored in a MongoDB database and queried with Prisma.
- The backend is built with NextJS server components and server actions.
- Implemented authentification using clerk.

Live website / Github Repository
WORDPRESS.COM Website Clone
React, TailwindCSS

- Implemented responsive and dynamic user interfaces that closely resemble the original website's design.
- Utilized React components to modularize the codebase, promoting reusability and maintainability.
- Leveraged React Router to enable smooth navigation between different pages of the website.

Live website / Github Repository
Weather App
NextJS, React, TailwindCSS

- Developed a responsive, user-friendly interface where users can enter any location, select units of measure and language for the content, and view the weather forecast for the next five days.
- Integrated the OpenWeatherMap API to retrieve real-time weather data for the specified location.
